4. Recommended LINKRA Ingestion & Demo Workflow

Step 1: Ingestion — Upload the provided TXT/PDF/CSV source files through the LINKRA ingestion pipeline.

Step 2: NLP & Entity Resolution — Run the NLP extraction and entity-resolution pipeline to generate canonical records.

Step 3: Graph Projection — Project resolved canonical entities and relationships into Neo4j.

Step 4: Verification — Verify the generated knowledge graph against the casebook relationship map.

5. Exact Verbatim Seed Script (Raw Ingestion Text)

-- Recommended demo method:
-- 1) Upload the provided TXT/PDF/CSV source files through LINKRA ingestion.
-- 2) Let the ingestion + NLP + entity-resolution pipeline create canonical records.
-- 3) Project canonical entities and relationships into Neo4j.
-- 4) Verify the generated graph against the casebook relationship map.
